

Quality Counts:

Choose the right hospital and doctor for you in the: *Orlando area*

WHAT IS TRANSPARENCY?

Transparency in healthcare means having facts about cost and quality. As costs rise and provider networks narrow, it's crucial that consumers have access to transparent information to make informed decisions when selecting the right hospital and the right doctor for their care.

When presented with objective information about physician experience and related hospital quality,

85% OF PATIENTS

would select a *different* physician than they did before doing their homework.*

IN THE U.S.

Consumers need to research the hospitals where physicians practice. Getting the right care means selecting the right doctor and the highest quality hospital for their care needs.

1 OUT OF 6

patients received care in 1-star hospitals with higher than expected mortality rates or complication rates.**

MORE THAN 222,392

LIVES POTENTIALLY COULD HAVE BEEN SAVED

if all hospitals performed similarly to hospitals receiving 5-stars.***

IN THE ORLANDO AREA

Unfortunately

41.0%

of patients receive care in hospitals with higher than expected mortality rates or complication rates.**

By doing their homework, consumers can select the right doctor and right hospital for their care needs in the **Orlando area**.

The Top Performers

Before beginning their care journey, consumers should start their research at Healthgrades.com, where they can find the right hospital and the right doctor based on information physicians say matters most. By doing their homework, consumers can actively lower their risk of experiencing a less than desired outcome.

In the Orlando area, the top performing, highest quality hospitals for patients being treated for the following conditions or procedures include:

FOR HEART ATTACK

WHAT WE DO

Healthgrades is revolutionizing the way people find the right doctor and hospital for them, by providing transparent, comprehensive information that has never been available in one place such as:

Healthgrades 2016 Report to the Nation features comparative data about hospitals throughout the U.S.

Healthgrades is the only site that provides consumers with objective data based on more than:

12,000
Diseases, conditions and procedures

1,100
Specialties

90%
Inpatient hospital admissions

Area is defined as the Core Based Statistical Area (CBSA) for that city.

* 2015 Stax Research Study for Healthgrades on Consumer Behavior When Choosing a Doctor.
** Based on Medicare data across the 10 conditions and procedures studied during the 2012-2014 study period.
*** Statistics are based on Healthgrades analysis of MedPAR data for years 2012 through 2014, if all hospitals as a group, performed similarly to hospitals receiving 5-stars as a group across all rated cohorts.
